PREFACE.

Dr Watt, the Author of the Bibliotheca Britannica, died when only a few of its sheets were printed off. He left the work, however, in such a state of forwardness as not to affect its completion; and, shortly before his decease, circulated a Prospectus, containing copious specimens and explanations of the plan of the intended publication, which was very favourably received. From this prospectus, the following explanatory remarks are extracted, in as concise a form as possible.

In the First Part of the work, the Authors are arranged in alphabetical order, and under each is given a chronological list of his works, their various editions, sizes, and prices. In the Second Part, the same materials are digested under the names of the various subjects to which they refer, and under each the titles of works are again arranged chronologically. The first part is a full and comprehensive catalogue of authors and their works;—the second an equally complete and extensive encyclopædia of all manner of subjects on which books have been written. To make the work more perfect, and, at the same time, condensed, a mode of reference has been adopted by which any title may, with ease, be traced from the second to the first part. In this, the reader has to notice the *number* and *letter* at the end of the article; he then finds the same *number* on the top of the columns in the first part; he next runs down the margin till he comes to the *letter*, between which and the succeeding one he will find the article wanted. The first figure on the top of the page marks the number of the alphabet with which the page begins,—the second the number of the alphabet with which it ends. Thus, page 3. begins with 2 *d*, and ends with 2 *t*: page 4. begins with 2 *u*, and ends with 3 *k*, &c.

The first division of the Bibliotheca Britannica contains the names of upwards of forty thousand Authors, and of each, as far as possible, a short biographical notice is given. It thus serves, in some measure, as a concise but comprehensive biographical dictionary, containing

186294

not only all the literary names to be found in other dictionaries of that kind, but many thousands more derived from other sources. The lists of their works, too, are much more ample; their titles are given at full length; and the various editions, translations, and subsequent improvements are most particularly noticed. Upon the early printing, both of this country and the continent, much pains has been bestowed. All the early British printers, noticed by Ames, Herbert, and Dibden, have been inserted, and the works arranged both under the printers' names and under their respective authors. Notices, equally full, and from other sources, have been given of every early foreign printer of any eminence; and the works entered under these are, in like manner, given under their authors. There is thus condensed into this part of the work, the substance of all that has been published with regard to the early history of printing. The account given of the Greek and Roman classics, and other more modern works which have been considered as classical, is much more comprehensive than any thing which has been printed in this country. Besides the list given of the British and Foreign editions of their different works, there is likewise given an account of the English translations, whether printed separately or forming a part of other works; and also of the principal translations which have been made in the other modern European languages. The system of arrangement, too, in articles of this kind, is simple and condensed, both from the manner in which the different works of the author have been separately classed, and from the numerous contractions which have been adopted. The account given of British writers and their works is universal, embracing every description of authors, and every branch of knowledge and literature. What has been admitted of foreign publications, though selective, forms a very considerable and valuable portion of the work, and, as none of any note have been purposely omitted, the Bibliotheca Britannica may be considered as an universal catalogue of all the Authors with which this country is acquainted, whether of its own or of the continent. In addition to those titles of distinct or separate publications which come properly under the scope of the work, all the more important periodical works on art and science have been minutely analysed, and the various papers entered under their author's name, with a reference to the volume and page of the publication where they are to be found. This has been done with the Transactions of the Royal Societies of London and Edinburgh, the Transactions of the American, Linnean, Geological, Horticultural, &c. Societies, the Transactions of the Irish Academy, the Archæologia, Hearn's Collection, Duncan's Commentaries, Nicholson's Journal, Tilloch's Philosophical Magazine, Thomson's Annals of Philosophy, Medical and Physical Journal, and many other works of a similar kind.

The Second Part or division of the work is a minute index to the first. In this part the subjects are arranged alphabetically; and under each all the works, and principal parts of works

treating of that subject, are arranged in chronological order, so as to form a sort of annals of what has been written on every subject, from the first publication to the last. This part, too, besides serving as a minute index to the first, includes a very complete list of all the anonymous and pseudonymous works which have appeared in this country. These are inserted according to their respective subjects and dates; and to those which have appeared within the last half century, the publishers' names have been given. Definitions, chiefly scientific, and geographical notices of places, consistent in briefness with what is said regarding authors in the first part, have been pretty generally admitted; and where the subjects are extensive, or of a vague or comprehensive description, they have been arranged under various subdivisions, or placed under their different significations. Countries and kingdoms have one systematic classification throughout. Under the names of places, there is prefixed a list of the eminent literary characters to which they have given birth—an addition not necessary to the plan of the work, but which may prove curious and interesting.

These explanations will, it is hoped, enable the reader to form a pretty good notion of the design of the work now laid before him; and it remains with him to determine its utility. In an undertaking of such magnitude, and so extensive in its scope,—having all the disadvantages of a first attempt, and the blunders and contradictions of numberless authorities to combat with,—many inaccuracies, doubtless, must have passed, and much must have been omitted. These, every candid mind will make allowances for. If unwearied care and indefatigable labour for nearly twenty years—if the sacrifice of a useful life in the cause—was all that was necessary to render the Bibliotheca Britannica accurate and complete, there would now be little solicitude about its success.

ALDUS, Manutius the Elder, or, as he occasionally calls himself, Aldus Romanus, or Aldus Manutius Romanus, a most celebrated Printer, was born at Bassiano, a small town in the vicinity of the Pomptine
v Marshes, 1447; died 1515. Two other printers of the same family, have been particularly distinguished; Paul Minutius, his third son, born 1512, and Aldus the Younger, or son of Paul Minutius, born 1547. The former of whom died 1594, the latter 1597. The range of Aldine editions extends from 1494 to 1597. With regard to the choice of them, those executed by the elder Aldus are greatly preferred by some collectors, while others esteem nearly equally all printed before 1529. Some seek with great avidity those printed by Paulus Minutius, particularly those prior to 1562. The following alphabetical list contains the acknowledged genuine editions of the Aldine Press:—Ferdin. Abduensis Orat. et Epigram. Ven.

ALKMAR, or ALKMAAR, Henry, a supposed writer, whose name leads rather to a dissertation than a life, passes for the author of a poem in old German, very popular in that country, and entitled—Reineke de Voss, or Reynard the Fox, a kind of satire on the manners of the times during the feudal system. What was thought to be the first edit. of Reynard was printed at Lubec, in 1498, and frequently reprinted at Rostock, Francfort, and Hamburg. There is, however, in the library of the city of Lubeck, a copy of a work, with the same title, and nearly the same contents, but more full, and in prose, printed at Delft, 1485; and another has
l been discovered still older, printed at Goudes or Tergow, by Gerard Leew, in 1479. These two Reynards are exactly the same, written in the Dutch or Flemish dialect; differing little from that of Friesland, Westphalia, or Lower Saxony. From them, it would appear that Alkmaar had done no more than to versify and enlarge the fictions of the old Reynard. He says himself, in the preface, that he translated the present work from the Welch and the French.

APPIAN, an eminent Historian, flourished under the reigns of Trajan and Adrian, about A. D. 123.—He wrote the Roman History in Greek, in a very peculiar method, giving distinct histories of all the different nations that had been conquered by the Romans, and placing every o thing relative to those nations in one connected and uninterrupted narrative. Of all this voluminous work, there remains only what treats of the Punic, Syrian, Parthian, Mithridatic, and Spanish wars; with those against Hannibal, the civil wars, and the wars in Illyricum, and some fragments of the Celtic or Gallic wars. These have been translated into English under the titles—An Auncient Historie and exquisite Chronicle of the Romanes Warres, both Ciuile and Foren. Written in Grecian by the noble Orator and Historiographer Appian, of Alexandria, one of the learned Counsell to the moste mightie Emperoures Traiane and Adriane. In which is declared, their greedy desire to conquere others. Their mortall malice to destroy them- p selues. Their seeking of matters to make warre abroad. Their picking of quarels to fall out at home. All the degrees of sedition, and all the effects of ambition. A firme determination of fate thorough all the changes of fortune. And finally an euident demonstration that peoples rule must give place, and princes power prevayle. With a Continuation, bieause that part of Appian is not extant, from the death of Sextus Pompeius, second sonne to Pompey the Great, till the ouerthrow of Antonie and Cleopatra; after the which time, Octauianus Cæsar had the lordship of all alone. AUGUSTINE, St. or, contracted, St. Austin D. Aurelius, an eminent Father of the Church, was born at Tagasta, Nov. 13, in the year 354; died of a fever, 28th Aug. in the year 430, at Hippo, while that city was besieged by the Vandals. Such was the popularity of St. Augustine, that Panzer enumerates no less than 176 editions of various parts of his works, before 1500, of which the following are the principal:——— SINGUL. OPUSC.—St. Augustine of the City of God, with the Com- g mentary of Ludovicus Vives. Lond. 1610, fol. Reprinted 2d edit. 1620. This latter edition is the best. De Civitate Dei, libri xxii. Printed in; Monasterio Sublacensi Conradus Sweynheym, et Arnoldus Pannartz die vero 12, mensis Julii, MCCCCLXVII. fol. This is the editio princeps of this curious work. It is ornamented with illuminated capitals, and is elegantly printed. This, with the editions in 1468 and 1470, consist collectively of 825 copies, and must therefore be works of extreme rarity. This work has of late become very interesting, as being the foundation of those opinions afterwards forwarded by Godeschalcus in the 9th century, and particularly by Calvin in the 16th, relating chiefly to Pre- i destination. De Civitate Dei, editio princeps Romana, cum literis cap. depict. et deaur. Romæ, apud Sweynheym et Pannartz, in domo P. de Maximo. 1468, fol. De Civitate Dei, edit. vetus et perantiqua, absque loci et anni indicatione, sed ante annum 1470, excusa, fol. This h edition contains the first impression of the Commentaries of Valesius and Trivetus, upon the text of St. Austin. It is printed in double columns, on fine stout paper. Venet. 1475. This edition seems to have been done from one of Jenson's, that came out the same year, being both of the same type, and equally neat and elegant. The printer is j Gabriel Peter de Tarvisio. De Civitate Dei. Neapoli, 1477, fol. De Civitate Dei, cum Comment. Thomæ Valois, et Nicolai Triveth. Basil. 1479, fol. De Civitate Dei. Lovan. 1488.
